**Contact Lens Precision Laboratories (CLPL) Announces Acquisition of Scotlens Limited**

**CLPL Expands Specialty Contact Lens Portfolio with Strategic Acquisition of Scotlens**

*The acquisition strengthens CLPL's portfolio and position in the custom contact lens market and enhances patient care capabilities.*

CLPL, the parent company of Ultravision, a leading innovator in specialty soft contact lenses and part of the SEED group, today announced the acquisition of Scotlens, a respected Scottish manufacturer of custom contact lenses known for its expertise in Ortho-K, keratoconus and irregular cornea solutions.

This strategic acquisition combines Ultravision's advanced manufacturing capabilities and global distribution network with Scotlens' renowned clinical expertise and custom-designed lens technologies. The move is set to enhance the combined company's ability to serve eye care professionals and their patients with specialised vision needs.

"Bringing Scotlens into the CLPL family represents a significant step forward in our mission to provide innovative vision solutions for challenging eye conditions," said Sarahjane Cross FCCA, CEO of CLPL and Ultravision. "As a subsidiary of SEED, this acquisition further strengthens our global presence while allowing us to maintain Scotlens' reputation for clinical excellence and personalised care, which aligns perfectly with our commitment to improving quality of life through enhanced vision and eye health for children and adults worldwide. We are looking forward to welcoming the Scotlens team and customers into the CLPL family."

Scotlens has built a strong reputation for its custom lens designs and fitting expertise, particularly for patients who require orthokeratology, or those with keratoconus, post-surgical corneas, and other complex vision requirements. The company's patient-centred approach and technical innovation have made it a trusted partner for specialty eye care practitioners across the UK.

"We are excited to join forces with CLPL and Ultravision and become part of the SEED group,"

said Scott Brown, CEO of Scotlens. "This partnership will allow us to extend our reach and bring our specialised lens designs to more patients globally while maintaining the personalised service that has defined Scotlens. The backing of SEED provides us with additional resources to further enhance our innovative solutions."

The acquisition is expected to expand the combined product portfolio to address a wider range of complex vision conditions while enhancing manufacturing capabilities and increasing production capacity. The integration will strengthen research and development resources to accelerate innovation and improve service and support for eye care professionals.

Practitioners currently fitting Scotlens products will continue to receive the same high-quality lenses and service they rely on, with the added benefit of access to Ultravision's expanded product range and technological resources, all supported by SEED's global expertise in vision care.
